

CloudSync Product Guide

Overview

CloudSync is an internal file synchronization platform used by employees to securely synchronize approved work files across company-managed devices.

Supported Platforms

CloudSync supports Windows 10/11, macOS 13 or later, and managed Android devices. Linux is not currently supported by the company client.

Authentication

Employees sign in using their corporate email address and company password. Multi-factor authentication is required for first-time sign-in and for sign-ins from an untrusted device.

Storage Limits

Standard employee accounts include 100 GB of storage. Project accounts can receive additional storage after manager approval.

File Restrictions

Executable files, private encryption keys, and files containing active credentials must not be synchronized through CloudSync.
