

Standard Operating Procedure: Password Reset

Purpose

This procedure describes the approved process for resetting a corporate account password.

Step 1

Open the Security Portal from the company intranet or approved company bookmark.

Step 2

Select 'Reset Password' and enter the corporate email address.

Step 3

Complete identity verification and approve the MFA request.

Step 4

Create a new password that satisfies the displayed password policy.

Step 5

Sign in again to the affected service and verify that access has been restored.

Security Rule

IT Support must never request a user's current password, MFA recovery code, or private authentication secret.
