

# **Account Login Troubleshooting**

## **Incorrect Password**

After five unsuccessful password attempts, the account is temporarily locked for 15 minutes. Do not repeatedly retry during the lockout period.

## **Password Reset**

Employees can reset a forgotten or expired password through the Security Portal after completing identity verification and MFA.

## **Account Locked**

If an account remains locked after the automatic lockout period, contact IT Support and provide the employee ID and approximate time of the failed login attempts.

## **New Device**

A first login from a new company-managed device may require additional MFA verification and device registration.
